

C# .Net Full Stack Developer

Description

What You'll Be Doing:

- Software development of the next generation online practitioner software and E-commerce solutions
- Web application design and development focusing on both the UI and back-end tiers using C#, .Net Core, MVC, Angular.js and SQL
- SQL Server database design and development as well as stored procedures
- Evaluate technical alternatives and feasibility; provide input for building detailed functional/technical design documents that offer the best solution to the problem
- Consult with other designers and team-leaders to evaluate and develop product specifications
- Developing, testing & reviewing code while working in an Agile/SCRUM environment
- Recommend, build, and deploy processes and procedures to enhance & support the SDLC

Qualifications

What We Need You To Have For This Role:

- Over 5 years' experience developing in C# / .Net Core
- Extremely fluent in developing with MS SQL Server
- Experienced integrating Angular.js based FE with .NET API's
- Some familiarity with AWS/Docker/Kubernetes
- Enjoy working on a technical team with 3+ releases per month
- Thorough understanding of Object Oriented design patterns
- Regular completion of automated build tools and code quality checks
- Developing under Agile methodologies
- Experience using Logz.io, Serilog and MSTest
