Senior .Net Developer

Description

Scope of position

We are seeking a senior software developer with at least 7 years' experience in web application support and development with database design skills in a Microsoft .NET/SQL environment to join a support team and development projects in a fast-paced environment converting legacy applications and supporting existing ones. This candidate must have a strong development background developing and understanding solutions written in C# and strong debugging skills.

Responsibilities

Scope of position

We are seeking a senior software developer with at least 7 years' experience in web application support and development with database design skills in a Microsoft .NET/SQL environment to join a support team and development projects in a fast-paced environment converting legacy applications and supporting existing ones. This candidate must have a strong development background developing and understanding solutions written in C# and strong debugging skills.

Primary Responsibilities

- 7+ years' experience developing and supporting large systems on the Microsoft stack.
- Experience with Entity Framework, LINQ and Lambda Expressions.
- Must be able to design, build, and maintain efficient, reusable, and reliable C# code.
- Experience in cloud-based development environments.
- Experience with contemporary REST/web services development.
- Must have excellent interpersonal and communication skills both written and verbal with self-motivation.
- Must be able to identify bottlenecks and bugs, and devise solutions to these problems.
- Ability to work individually or within a team environment.
- Participate in requirement and design discussions with IT teams and/or business units, as needed.
- Translate customer needs and technology directions into application tasks.
- Ability to develop technology projects and solutions using Agile Scrum Framework; including prototyping, technical design, and specifications determined from business requirement documents.
- Ability to manage priorities in a fast-paced environment.
- Excellent attention to details.
- Solid understanding of Object Oriented analysis and design.
- Ability to take direction, constructive criticism and work to specified deadlines, with the ability to execute development code with limited guidance.
